New Amalga Mine | Highlights

- The New Amalga is host to at least five large, long gold bearing mesothermal veins
- **The 91 claims (2000 acres)** lie prominently within the historic 160-km long Juneau gold belt, a producer of over eight million ounces of gold
- 240 drill holes from 55 platforms totaling ~51,000m confirm a large complex mesothermal gold-quartz system
- Past drilling produced multi-ounce assays on several veins: DDH11E-2 reported 37.07 g/t gold over 15.7m. DDH12-311A reported 59.91 g/t gold over 8.08m
- Spring 2024 NI#43-101 report included an **Indicated resource of 1,438,500 ounces of gold at an average grade of 9.47 gpt Au** plus an **Inferred resource of 515,700 ounces of gold at an average grade of 8.85 gpt Au** (open to length and depth)
- Multi year water sampling programs currently
- Channel samples on the Goat Vein assayed 129.02 g/t gold (3.76 opt) and 290 g/t gold (8.46 opt) with 224 g/t silver (6.53 opt)
- LiDAR survey of property and shows numerous targets requiring further exploration
- Received excellent metallurgical recoveries up to 98.2%

New Amalga | PRIMARY VEINS WITH GEOLOGY

RECENT Drill Highlights

- 2020-2023 drilling tested the eastern extents of the known mineralization as well as some of the deepest drill holes to date on the property. In addition, the most southerly drilling took place testing additional structures
- The Goat vein was extended to the east for more than 150m in near surface drilling and is still open. Three intersections 100m or more below surface intersected excellent grades up to 80m east of the established resource
- The Ridge vein had at least five intersections with the best grades returned 200m below its surface outcrop
- The Main Vein had fourteen intercepts with results ranging up to 18.67 g/t Au over 2.63m in 20T-8
- The Deep Trench vein was tested by seven drill holes, extending mineralization 100m farther to the east within 100m of surface and to depths of 500m below surface peripheral to the established resource
